

1. A contact lens case for storing contact lenses comprising:
 - a base having a top side;
 - at least one reservoir on the top side of said base and having an outer surface;
 - a flange for said at least one said reservoir, said flange being attached to the outer surface of said reservoir and having its own outer surface; and
 - a reflective surface covering for the outer surface of at least one said flange and having a reflective outer surface.
2. The contact lens case of Claim 1, wherein said outer surface of said reservoir includes threads.
3. The contact lens case of Claim 2, wherein each said flange has an inner surface that includes threads adapted to engage said threads of said reservoir.
4. The contact lens case of Claim 1, wherein said outer surface of at least one said flange includes a basin.
5. The contact lens case of Claim 4, wherein said reflective surface is adhered within said basin, and having a reflective outer surface.
6. A contact lens case for viewing insertion or abstraction of contact lens into or from the eye comprising:
 - a base having a top side;
 - at least one reservoir on the top side of said base and having an outer surface;
 - a flange having a basin for said at least one said reservoir, said flange being removably attached to the outer surface of each said reservoir and having an outer surface; and

a reflective surface attached to the outer surface of at least one said flange and having a reflective outer surface.

7. The contact lens case of Claim 6, wherein said outer surface of said reservoir includes threads.

8. The contact lens case of claim 8, wherein said flange has an inner surface that includes threads adapted to engage said threads of each respective said reservoir.

9. The contact lens case of Claim 8, wherein said reflective surface is of a depth that is less than that of the depth of said basin and is secured within said basin by the folding toward center of the additional depth of the said basin over the depth of said reflective surface, and having a reflective outer surface.

10. A contact lens case for viewing insertion or abstraction of contact lens into or from the eye comprising:

 a base having a top side;
 at least one threaded reservoir on the top side of said base and having an outer surface;

 a flange for said at least one said reservoir, said flange being removably attached to the outer surface of each said reservoir and having an outer surface; and
 a reflective surface adhered to the outer surface of said at least one said flange and having a reflective outer surface.

11. The contact lens case of Claim 10, wherein said flange has an inner surface that includes threads adapted to engage said threads of each respective said reservoir.
